

Install timeBuzzer Mac App

Part 1: Installation

Part 2: Gatekeeper Settings (as may be necessary)

Part 1: Installation

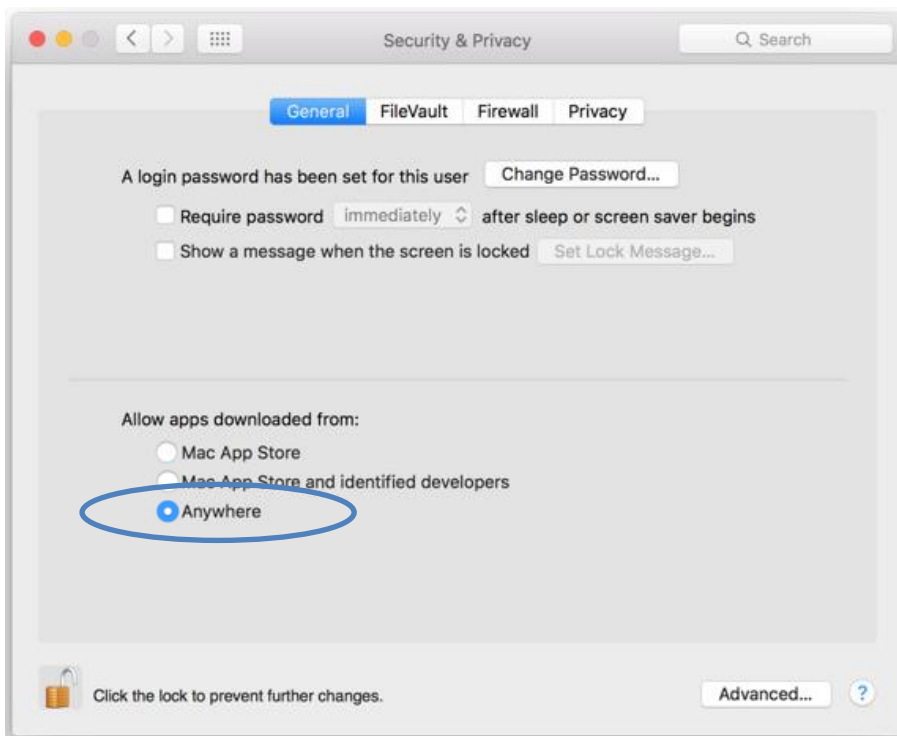

1. Download (<https://timebuzzer.com/download/timeBuzzer.dmg>)
2. Double-click on DMG file to mount the image. You find the image in the sidebar of the Finder. If an error message appears, go to „Part 2: Gatekeeper Settings “.

3. Click on „timeBuzzer“ in the sidebar.
4. Drag and drop the timeBuzzer.app into the folder „Applications“
5. You can start timeBuzzer from your Applications folder now.
6. You can eject the timeBuzzer.gmd file by clicking on the eject button.

Part 2: Gatekeeper Settings

1. Go to „System Preferences“ and " Security & Privacy".
2. Click on the lock-icon and enter your admin password.
3. In the section „Alloa apps downloaded from“ select the option „Anywhere“.
4. Now you can install the timeBuzzer app.

In case the option „Anywhere“ is not shown, you can activate it with this command in the terminal:

```
sudo spctl --master-disable
```

After you have installed the timeBuzzer app, you can disable the option “Anywhere” again with this command:

```
sudo spctl --master-enable
```
